SUPPLEMENT TO  
REPORT NO.

1. At the Vulkan-erft in Stettin the construction of submarines. On a banch, simultaneously, one behind the other, they are built at the same rate, so that they are launched (interval at most two days). Parts for the submarines are fabricated in a welding shop at the shipyard.
2. Three ways are available for small boats are built at the same time. The first stage of construction, and launchers for driven fishing boats, seagoing tugboats, which are capable of carrying three boats of these types; alternatively, these ways are used for the construction of large or medium-sized freighters, which are built in the adjacent fitting basin. The largest ships which can be built at the Vulkan-erft are of about 20,000 tons.
